

JavaScript IDE

+ HTML & CSS editor

www.jetbrains.com

Key Features

Explore Code with a Reliable Guide

Quick Navigation right from the editor:

- Go to declaration — navigates to where the function, variable or label in question is declared.
- Go to symbol — navigates to any symbol in project code.

Need to go back to the place you changed last? Simply press **Ctrl + Shift + Backspace**.

Find/Highlight Usages locates any and all places in your entire project where a given symbol is used:

Refactor and Evolve Your Code

Refactoring capabilities provided for HTML, CSS and JavaScript allow you to easily and safely modify the code structure as well as undo any modifications:

- Smart Rename
- Introduce variable/parameter
- Inline variable/function
- Extract method
- Wrap with tag/unwrap
- Auto-Indent lines
- Move
- Safe Delete

JavaScript Unit Testing

If you're a JavaScript developer, you probably know that the quality and correctness of your application are crucial. Well, consistency and regression testing just got a little less painful. Meet the JsTestDriver plugin:

Extended JavaScript Frameworks Support

WebStorm supports JQuery, Yahoo UI, Prototype, DoJo, MooTools, Qooxdoo, and Bindings.

Productivity Boosters

Code Faster with Smart Code Completion

WebStorm will take care of details and make your coding faster. It provides you with auto-completion for:

- HTML tags, attributes, styles and CSS classes
- JavaScript functions and event handlers
- Function return type from its body

Complicated language mixtures with HTML markup or SQL inside JavaScript? Check out how WebStorm handles this:

Validation and Quick-Fixes

WebStorm detects and suggests auto-fixes for such problems as:

- Missing closing tags
- Invalid CSS selectors
- Wrong references to files
- Unused JS parameters
- Duplicate attributes
- And more...

Key Features

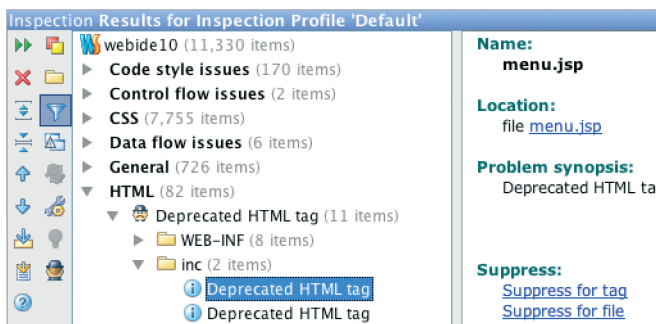

Code Coverage in JavaScript Unit Testing

Code coverage for unit testing provides a clear picture of which parts of your code remain untested. From now on, users of JsTestDriver can measure code coverage visually.

Analyse Thoroughly

No need to click through all the files or deploy to a server to spot errors and warnings. Start Code Analysis for the whole source tree, select Inspections to run, and see all results in a single view.

Employ Latest Web Trends

We are constantly improving WebStorm to support new standards:

- HTML5
- ECMAScript Harmony
- CoffeeScript
- Node.JS
- LESS & SASS extensions for CSS

The IDE understands HTML5 tags and attributes:

JavaScript "strict mode" enables WebStorm to mark as errors all references of undefined variables and duplicated parameters.

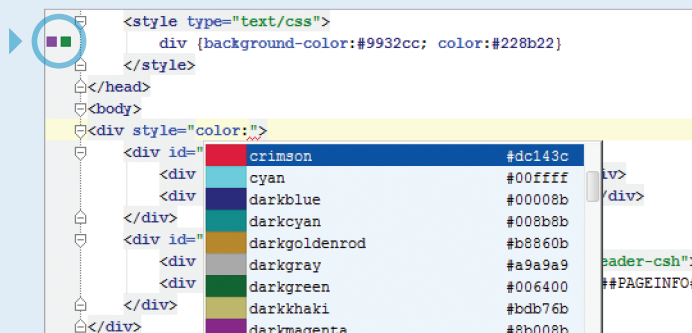

Productivity Boosters

Quick Color Preview

We know: the Devil is in the details.

WebStorm makes your work easier when it comes down to little things like selecting the color of an HTML element.

The editor visualizes the colors used in your code.

JavaScript Debugger Right in the IDE

WebStorm provides JavaScript Debugging based on Mozilla/Chrome right from the IDE:

- Customizable breakpoints in HTML and JavaScript
- Frames, variables and watches views in the Debugger
- Runtime evaluation of JavaScript expressions

High-Speed Zen Coding

HTML Editor allows you to utilize all the power of Zen Coding.

Type `div.feature>h4+p`, press **TAB** and you'll get

```
<div class="feature">
  <h4></h4>
  <p></p>
</div>
```

IDE Generic

Version Control Integration

WebStorm supports many popular Version Control Systems including Subversion, Perforce, Git, Mercurial, CVS and more. A built-in visual merge tool resolves all conflicts in a quick and intuitive manner.

The changes made locally are highlighted in the editor gutter as you type.

Remote Project Synchronization

Synchronize your project files with remote servers via FTP, with a network drive, or with one or more remote hosts.

Edit remote files locally and deploy back to the server using automatic synchronization on file save.

Our customers

for the record... #WebStorm is THE HEAT! for the money
I don't think you could find a better HTML/JS editor

 @simpulton

I'm really speechless. I'm really not getting paid for saying this
but @jetbrains WebStorm gives all the love to JS hacking it
deserves!

 @cburgdorf
